

## The Karate Kid (Writing a film Review)

The Karate Kid is the best action film I have seen in a long time. The director is Harald Zwart the main actors are Jaden Smith and Jackie Chan.

The story is about a boy named Dre Parker who moves from Detroit, America to live in China with his mother. Some of the students in his new school always bully him so he wants to learn kung fu to protect himself. Then he meets Mr Han (Jackie Chan) who teaches him this martial art. He also learns about a kung fu competition so he decides to enter it. This film is mainly about how he prepares himself for the competition and then how he finally wins.

My favourite part of the film is when he enters the competition because this is a really exciting action part. I couldn't stop watching it. Dre (Jaden Smith) hurts his leg during the competition but he doesn't give up and continues to compete.

If somebody asks me which film is my favourite, I must say The Karate Kid. I would recommend it to everyone.

## Project: Weird and Wacky Animals

### FACT SHEET

Name of the animal: Bubit (butterfly and rabbit)

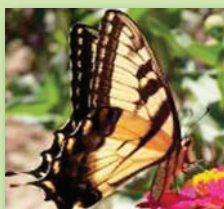

Physical Appearance	It looks like a bat, but it has beautiful wings. It is covered with white fur. It can run very fast and fly high. It can flutter like a butterfly.
Habitat	Bubits live in trees and in the wild. They have a permanent home.
Food	They eat fruit, such as berries and cherries. When they eat, they make sound like a pig grunt.
Reproduction	When a butterfly and a rabbit mate, they produce a bubit.
Special features	Bubits are an endangered species because there are not many mixtures of rabbit and butterfly.

### FACT SHEET

Name of the animal: Flypen (Butterfly + Penguin)

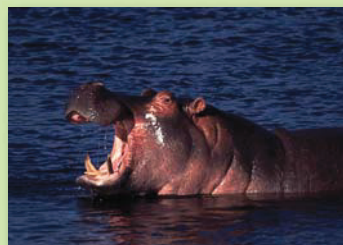

Physical Appearance	It is as big as a penguin. It has wings like a butterfly. It cannot walk with its feet, which are only used for standing and it flies with its wings. Its skin is covered with penguin fur.
Habitat	Flypen lives under a cliff. It uses branches, leaves and feathers to build its shelter.
Food	Flypen eats honey. It uses its legs to hold branches and uses its wings to protect itself when eating honey.
Reproduction	Flypen has offspring twice a year and lays ten to twenty eggs at a time.
Special features	Flypen has colourful wings, two legs and two feelers. It is furry. The feelers are very long and blue. When it feels there is honey, the feelers move strongly. When it is attacked, it uses its wings to protect itself.

## Project: Weird and Wacky Animals

### FACT SHEET

Name of the animal: Tiro ( tiger + rhino)

Physical Appearance	It is a mixture of rhino and tiger. It has a horn of rhino, a pair of tiger eyes, stripes of tiger, strong legs of tiger, very thick and hard skin of rhino and it weighs about 100kg.
Habitat	Tiros live in the mountain caves, where they store their food and take a rest and have night sleep.
Food	They catch animals around and eat their meat.
Reproduction	Female tiros will be mature for gestation at 20 years old. Each gestation will take 2 years and only one offspring will be born. It makes tiros rare in the world.
Special features	Tiros run as fast as leopards and their momentum is great in combining with their weight. With thick and hard skin, no other animals can hurt them, especially when they are running.
